Art Unit: 1773

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 2-21 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a magnetic recording medium, does not reasonably provide enablement for any and all other types of recording media. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims.

Applicant's specification makes clear that the claimed DLC film is specifically for deposition on a magnetic thin film (See summary of the invention Col 2 lines 25-36) and applicants detailed reasons for why the adhesibility of the claimed carbon film is an improvement. Note especially Col 3 lines 60-67. Furthermore only magnetic materials are described for the magnetic layer (Col 4 lines 1-5; Col 6 lines 64-67)). There is no other disclosure of any other recording medium or of any surface characteristics that would enable one of ordinary skill in the art to prepare a recording media other than a magnetic recording media that would provide the benefits of the invention.

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double

patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 2-21 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-19 of U.S. Patent No. 6805941, claims 1-97 of U.S. Patent No. 5989672, and claims 1-27 of U.S. Patent No. 5637373 in view of Itoh et al US 5614314.

The limitations of present claims 2-21 may be found in the limitations of claims 1-19 of the '941 patent; see especially claims 2, 6, and 7-10. They are also found in the limitations of claims 1-97 of the '672 patent; see in particular claims 1, 3, 6, 31, 32, and 57. It would have been obvious to one of ordinary skill in the art to vary the limitations to create optimum embodiments for a given magnetic layer, head configuration and recording-reproducing system.

Claims 1-27 of the '373 patent teach all of the limitations of the present claims except the Hydrogen content of the carbon film and the film's Vickers hardness (See especially claims 6, 8, and 11). However DLC carbon films were recognized to contain Hydrogen which effected the hardness and surface properties of the film. Itoh et al has been provided as evidence of this) See Claim 8, Figures 1 and 5.

Therefore, it would have been obvious to one of ordinary skill in the art to vary the Hydrogen content of a carbon film to provide an optimum balance of hardness and sliding performance.
